

Clinical Companion

The age of the paper patient record is over. Clinical Companion is your secure gateway to up-to-the-minute patient information, anywhere, anytime.

Clinical Companion is a white-label mobile app, enabling clinicians to access patient information, communicate, and collaborate on the go. The app helps to improve workflow efficiency and quality of patient care.

Benefits of Clinical Companion

On-the-Go Access

On-the-go access enables clinicians to spend more time with patients

Up-to-Date Information

Provides up-to-the minute information on patient lab results, allergies, conditions and medications

Synced and Shared

Photos and notes are securely synced to Orion Health Clinical Portal and can be shared between users, eliminating security issues caused by staff using consumer-focused photo apps

Resource Efficient

Reduces reliance on shared workstations, potentially reducing cost

White Label Application

'White label' application which can be branded to suit your organisation

Features

Up-to-Date Patient Info

Clinical Companion provides clinicians with a concise summary of a patient's health, giving them the ability to view the latest patient info—wherever they are. Based on the user's configuration clinicians will have access to; patient demographics (name, age, gender, address, and contact info), lab results, allergies, alerts, conditions, and medications.

Collaborative Worklists

Collaborative Worklists provide clinicians on-the-go access to lists of patients under their care. Accessible across Clinical Portal and Clinical Companion, collaborative worklists can be easily shared amongst the care team, enabling greater collaboration. A list of recently viewed patients helps with quick access to the users most commonly viewed patients.

Patient Search

Clinicians can search for patients by their primary identifier or by first and last name. Search on-the-go reduces the time required to sign-on to a clinical workstation and locate a patient record.

Secure Photos

One of the biggest security issues facing health organisations is the widespread use of consumer-focused photo apps, which save photos to the device. Photos in Clinical Companion are secured within the app and saved to the master patient record, not to the device camera roll.

Shared Quick Comments

Clinical Companion allows clinicians to create secure notes about the patient that can be kept private or shared with the rest of the care team.

Task Management

The Task feature allows clinicians to easily create, manage, and keep track of their daily patient task lists.

Syncs With Portal

Changes to patient lists, comments, and photos sync with Clinical Portal allowing users access to the latest information.

Future-proof your journey from Interoperability to Population Health and Precision Medicine.
