EMR Connect

Integrates a patient's community-shared record within a clinician's EMR

EMR Connect is used alongside the clinician's own EMR, to provide rapid access to an organised, filtered view of the patient's shared record. The solution automatically detects which patient record the clinician is viewing on their EMR, scans the shared record, and notifies the clinician if additional patient information is available.

Benefits of EMR Connect

Reliable Access to the Shared Patient Record

EMR Connect offers a reliable way to access detailed, well-organised, patient-specific health information contained in a patient's shared record, enabling a high standard of patient care.

Time-Saving Desktop Notifications

The notification system in EMR Connect alerts the clinician when there is relevant information about their patient in the shared record. This saves clinicians time, as they can stay in their workflow, only accessing the shared record when they're sure there's new information available.

Easy Deployment

EMR Connect can be downloaded and installed to the desktop by your clinicians, making life easy for your IT department and saving deployment cost.

Flexible to Your Solution

EMR Connect works with Orion Health Amadeus or Coordinate. It can be selected as an add-on for either solution.

Key Features

EMR Integration

EMR Connect integrates the community-wide record to the desktop EMR system. It has been developed with a modular architecture that uses adapters to identify context changes. As the clinician changes the patient context in the EMR System, EMR Connect automatically searches the shared record for that patient.

Community Record Access

The clinician has access to quick links to retrieve patient-specific information. They can launch Amadeus Clinical Portal with the patient already selected, to view additional detail about their Allergies, Conditions, Medications. They can also upload and share Allergies, Conditions and Medications to the Community Record, enhancing data quality.

Care Pathways

While accessing or creating the shared patient record, the clinician can enroll the patient in a Care Pathway which the GP and Practice Nurse can access through Orion Health Amadeus.

Rich Security Model

Amadeus includes a rich security model based on the roles and attributes assigned to the user. It also includes a privacy model that allows several levels of accessibility. The application harnesses these technologies to provide secure access to authorised information only.

Future-proof your journey from Population Health to Precision Medicine.
Every step you take towards delivering personalised healthcare is valuable. Our end-to-end solution, built on our Amadeus platform, with inclusive real-time analytics, clinical, patient engagement and enterprise applications, will future-proof your journey.
